

// THE CHECKLIST

THE PRE-CALL RESEARCH CHECKLIST

12 signals every AE should check before a discovery call. Most teams skip 8 of them.

// 01 WEBSITE

What they sell, who they serve, rough size. Where the claim and the copy disagree, you have an opening.

// 02 ABOUT PAGE

Founding story, stated mission, team structure. Priorities and personality surface here first.

// 03 SERVICES PAGE

Packaging and pricing signals. What they lead with is positioning. What they bury is doubt.

// 04 META AD LIBRARY

Active ads, angles, and how long each has been running. An ad live for months is an ad that works.

// 05 GOOGLE ADS

The terms they bid on and the copy themes. Their offer, in their own words, priced by intent.

// 06 COMPANY LINKEDIN

Headcount trend, open roles, last post. Hiring shows the problem they are trying to solve.

// 07 DECISION-MAKER PROFILE

Title, tenure, background, what they post. You are selling to a person, not a company.

// 08 PAGESPEED SCORE

Run the homepage through PageSpeed. A slow, broken site signals budget and appetite.

// 09 TECH STACK

CRM, email platform, analytics, attribution. What they already pay for shows what they value.

// 10 CLIENT REVIEWS

G2, Clutch, Google. Praise sets the bar you have to clear. Complaints hand you the angle.

// 11 COMPETITOR SET

Who bids on the same keywords, and how they differentiate. Context decides the pitch.

// 12 RED FLAGS

Overpromising copy, no case studies, generic messaging. Decide what the call is worth before it starts.

// ALL 12 SIGNALS ARE PUBLIC DATA. A SYSTEM I BUILT READS THEM IN ABOUT 90 SECONDS.
